

Pre-configured Hard Drives for CamDisc SVR, CamDisc HNVR and Cam4mobile

Hard Drives

Features and Benefits

- Pre-configured in removable caddy for use with CamDisc SVR and CamDisc HNVR
- Special HDD extensively tested for mobile applications for Cam4mobile

Removable Hard Drives

The hard disk in the removable caddy is configured and prepared for recording video data in CamDisc SVR and CamDisc HNVR digital video recording systems. The recording time (capacity) depends e.g. on the selected picture quality, recording speed and the motion in front of the camera. The duration of the recording can be increased by the use of the integrated motion detection or timer operation.

Technical Data Hard Drives	
Part-No.	Type/Description
4652	500 GB Removable Hard Disk for SVR series (3,5")
4653	1 TB (1000 GB) Removable Hard Disk for SVR series (3,5")
4654	2 TB (2000 GB) Removable Hard Disk for SVR series (3,5")
4672	1 TB (1000 GB) Hard Disk for HNVR series (3,5")
4673	2 TB (2000 GB) Hard Disk for HNVR series (3,5")
4664	320 GB Removable Hard Disk for Cam4mobile
4663	500 GB Removable Hard Disk for Cam4mobile
9115	HDD connection cable Hard disk drive connection cable for correct operation with SATA hard disk drives. Only applicable for CamDiscs SVR devices with the following serial numbers: CQ5XXYYY and CV5XXYY
8205	Data Recovery Recovery of recorded data of broken hard disks. This service is independent of the guarantee status of the hard disk and refers only to hard disks that are working electronically. In the event that the recovery fails, the service fee of €150.00 (net) will still be made. This fee includes the recovery of the archive password.
	Notes on HDD: Every hard disk is extensively tested for performance and functionality before release. Particular attention is given to the factors low power consumption and low heat development. These contribute to extended product life. To ensure that all CamDisc/Cam4mobile hard disks meet these criteria, every hard disk is coded, formatted, mounted in a CamDisc/Cam4mobile specific removable frame, and subsequently tested again. The offered removable hard disks are characterised by Serial ATA technology (SATA) and can be used generally in all HeiTel SVR-recorders. For CamDisc SVR 10s devices and 1 TB removable hard disks the following restriction is valid: 1 TB SATA hard disks are approved for devices starting from the serial number WV823xxx (and higher). The local evaluation of CamDisc hard disks larger than 200 GB hard disks requires a suitable PC or USB PC kit.
