The Topics:

- Hybrid Functionality for all HeiTel Systems
- CamControl iPhone released
- HeiTel at the SecuTech 2009 in Taiwan
- Network and Hybrid Solutions at the ISC West 2009, Las Vegas

Hybrid Functionality for all HeiTel Systems

Thanks to the newly developed firmware, the current range of HeiTel products CamServer, CamTel SVR, CamDisc SVR and Cam4mobile will function as hybrid video transmission and recording systems. IP cameras with standard and megapixel resolution in mixed operation with analogue cameras can now be operated with every HeiTel system.

Existing HeiTel installations just have to be updated remotely with firmware 1.74 (and above) to benefit from the new hybrid functionality. CamServer, CamDisc SVR and Cam4mobile can be operated as hybrid network recorder (HNVR).
