

Mobile & Stationary

From Mobile to Central Monitoring: Video Alarm Management using CamControl WM and EMS

The new software from HeiTel, "CamControl WM" (Windows Mobile) completes the HeiTel software portfolio with a power tool for all Windows Mobile (Releases 5 and 6) based Smartphones and PDAs.

CamControl WM

With CamControl WM both live and recorded images can be viewed with a high frame rate. Moveable cameras (PTZ's) can be easily controlled with the stylus and relays remotely operated. The HeiTel-owned and designed video compression procedure ensures pleasantly high frame rates, even with small bandwidths. Up to 10 fps can be expected, given a high speed connection such as HSDPA. All mobile radio standards such as GPRS, EDGE, UMTS, HSDPA,

CDMA as well as WLAN can be used for transmission.

Mobile access to live and recorded video footage with CamControl WM, easy to use video viewing and transmitter administration from a single PC with CamControl LITE and PRO and multi-operator, server/client based video alarm handling with the Event Management System EMS. HeiTel provides a software solution for all scenarios of professional video alarm management.

Event Management

EMS was developed specifically with emergency call centres and alarm/video receiving centres in mind. This sophisticated solution includes an alarm management tool with dynamic alarm processing and alarm database.

EMS fulfils the demanding requirements for alarm video management in monitoring centres, like the simultaneous handling of several video connections, the simultaneous multi-user operation and intuitive operation, despite extensive functionality for the handling, logging, evaluation and administration of video alarms. Optionally, "EMS Site Map", a tool for the production and display of interactive site plans, is available and "EMS TAPI", an interface for computer telephony integration.

User error is reduced to a minimum by the intuitively and clearly organised user interface. This is of crucial importance, since usually the operator has to handle multiple different systems.

Free Download

The free-of-charge download of the CamControl WM software as well as the CamControl LITE and PRO demo software along with further information can be found on www.heitel.com.

Software for operation and alarm verification using Windows Mobile based Smartphones and PDAs including PTZ control and archive evaluation

Software for stand-alone applications for operation, alarm verification and configuration

Software for stand-alone applications with Multi-Site functionality for operation, alarm verification and configuration

Autonomous control centre solution with CamControl SERVER and Event SERVER, with multiple operator stations consisting of CamControl CLIENT and Event CLIENT, including alarm management tool with dynamic alarm processing, alarm database and interactive site map administration by HeiTel
